

Morris Sydor is an Assistant Auditor General in the Office of the Auditor General of British Columbia. He has a Chartered Accountant designation and a Masters in Business Administration degree. He joined the Office of the Auditor General in 1978. Initially, he focused on financial statement audits, but quickly became involved primarily with performance audits (examinations of the management of government programs for economy, efficiency, effectiveness).

He has led many performance audits in various government sectors. Currently, he heads up the office's Sustainability and Environment group and is responsible for conducting performance audits primarily in energy, land use, resource development and environmental issues. Recent reports by the group have covered agricultural land protection, groundwater management, protected areas management, biodiversity conservation, and management of contamination risks.
