

**Summary of the analytical information on environmental conditions,
government regulation of nature management and
environmental protection in the Republic of Kazakhstan**

Nowadays transition to the environmentally safe and sustainable development becomes one of the significant priorities of the development strategy of Kazakhstan, one of the directions of which is environmental protection.

Due to this the information about conditions of the atmospheric air of cities and industrial centers, water sources, wastes of production and consumption, as well as government regulation of nature management and environmental protection in Kazakhstan was studied.

Analysis of the country environmental conditions was made using control results of the Accounts Committee for Control over Execution of the Republican Budget of the Republic of Kazakhstan, by the results of which basic conclusions and recommendations on improvement of environmental conditions and promotion of environmental safety were developed.
